Installation, Soldering and Cleaning

All BDB Series Standard Profile DIP Switches can be hand soldered or machine soldered without the use of boot, caps, tapes or special attention. Closed base washable models have unique design, allowing solvent cleaners and water / detergent solutions to flush and clean the electrical contacts of the contaminants and fluxes. For best results, follow these directions :

- 1) Wave soldering recommended at 500° F (260°C) solder temperature.
- 2) Hand solder using 30 watt small tip iron controlled at 500° F (260°C), 10 seconds max./terminal.
- 3) The bottom is sealed with resin to prevent flux penetration during wave soldering.
- 4) All switch actuators must be in 'OFF' position during soldering and cleaning processes.
- 5) If there is still a presence of flux, clean the flux using forced rinse, high agitation or triple bath cleaning method. Do not mask or cover the switch in any way during cleaning.
